

Superwall® Partitions (formerly known as RACO interior walls system) is a non-progressive demountable partition system that allows for the removal and replacement of any panel without dismantling the entire wall. Superwall® has been manufactured and installed for over 30 years and is a proven performer among building owners, developers, architects and general contractors. Superwall® incorporates an aluminum framing/glazing system which accommodates ceiling height glass, sidelights and doorframes. It allows organizations the flexibility to change as their business dictates. How will your workplace needs change in 3 months, 8 months or 2 years? Superwall® will allow your organization to adapt quickly.

Advantages of Superwall®:

- **Get quick lead times on all orders** - No eight-week waiting periods, Precision Walls, Inc. can be on site ready to work in just a few business days.
- **Gain genuine flexibility** – The components of Superwall® can be reused allowing for lower cost as your office space needs change. Change is a snap - due to its' non-progressive nature, you are able to access the middle of a partition for electrical or plumbing changes. Once you have completed your change you just snap the panel back in place. In addition you will be able to make changes in the middle of the partition vs. dismantling of the whole partition as you would in a progressive system.
- **Save money** - Save money on initial construction, maintenance costs and reconfiguring/upgrading your workspace. Enjoy the bottom line benefits.
- **Enjoy significant tax advantages** - Superwall® allows you to accelerate the depreciation of all your office partitions and related components such as doors and frames.
- **Aesthetics** – With a myriad of options Superwall® can be manufactured to your specifications. Panels can be laminated with a stock vinyl or wall covering of your choice.
- **Sustainable** – Your sustainable and economical solution to change. Superwall® Demountable Partitions' overall environmental performance contributes to LEED credits. Due to the construction of Superwall it is a reusable wall system. Not only is it made from recycled material it is also recyclable which in-turn reduces construction waste.
- **Reduce the schedule of your next project** - No delays as with typical gypsum board construction. Eliminate debris, sanding, finishing and painting.
- **Improve, update and reconfigure existing space quickly and easily** - Reduces the interruption of daily operations. Generate income quicker by accelerating the move in date for your tenants.
